AWS Cloud Quest
Cloud Practitioner

PROFESSIONAL SUMMARY

DevOps & Cloud Engineer with 3+ years designing, deploying & optimizing scalable cloud infra, automated CI/CD pipelines, and high-availability database architecture on AWS in FinTech and insurance domains. Hands-on expertise in network security (VPC, Subnets, Security Groups, IAM), load balancing (ALB/ELB), auto-scaling, and docker with exposure to Kubernetes, AWS EKS, Terraform (IaC) and Jenkins, GitLab CI/CD, AWS CodePipeline. Proficient in database performance tuning, Python and Shell/Bash automation and zero-downtime production deployments with exposure to Prometheus, Grafana and ELK stack along with AWS CloudWatch. Delivered 60-70% AWS cost reduction, 99.9% uptime on Multi-AZ architectures and 60% reduction in manual operational cycles through automation. Strong background in ETL/ELT development, production support, root cause analysis and Agile delivery.

TECHNICAL SKILLS

AWS	EC2, S3, VPC, IAM, RDS, RDS Aurora, Lambda, Application/Elastic Load Balancer (ALB/ELB), Auto Scaling Groups (ASG), Route 53, CloudWatch, CloudTrail, NAT Gateway, Internet Gateway (IGW), Multi-AZ Architecture, AWS EKS (exposure), Cloud Migration, Cloud Cost Optimization
Containers & Orchestration	Docker (Image Build & Configuration), Kubernetes (Working Knowledge), AWS EKS (Exposure), Container Deployment across Dev/Prod
Infrastructure as Code	Terraform (IaC Concepts and Practices)
CI/CD & Release	CI/CD Pipeline Design, Jenkins (exposure), GitLab CI/CD (exposure), AWS CodePipeline (exposure), Deployment Automation, Release Management
Scripting & Automation	Python, Shell/Bash Scripting, Infrastructure Automation, Configuration Management
Operating Systems	Linux – Installation, Configuration, Performance Tuning
Networking	VPC Design & Subnetting, Route Tables, Internet Gateway, NAT Gateway, VPC Peering, Load Balancers, Network Security Fundamentals
Monitoring & Logging	AWS CloudWatch, Prometheus (exposure), Grafana (exposure), Splunk/ELK (exposure), SSRS, Power BI, Log Analysis, Incident Management, RCA
Web Servers	Nginx
Version Control & Security	Git, GitHub, IAM Roles & Access Management, Security Groups, Least-Privilege Access, Compliance Controls
Databases	MS SQL Server, PostgreSQL, MySQL, T-SQL, PL/SQL, Stored Procedures, Performance Tuning, Query Optimization, Schema Design, Data Governance, Backup & Recovery
Data Integration & ETL	SSIS, Apache Spark, SparkSQL, Informatica PowerCenter, Batch ETL/ELT Workflows, Automated Data Ingestion, Data Quality & Validation Checks
Tools & Methodology	SSMS, AWS Console, JIRA, Credly, Agile / Scrum, UAT & Regression Testing, Technical Documentation

PROFESSIONAL EXPERIENCE

Total Experience: 3+ Years

Software Engineer 1 — Sept 2025 – Present

ReactorBee — Pune, India

- Design and execute advanced T-SQL/PL/SQL procedures and cloud infrastructure components to support high-volume data operations, ensuring data governance and infrastructure reliability.
- Collaborate with cross-functional teams in an Agile environment; drive code and configuration reviews to ensure compliance with architectural and data security standards.
- Optimized data retrieval and processing speeds by 25% through systematic performance tuning of SQL queries and database components.
- Engineered highly scalable database components and schemas for enterprise data solutions supporting high-volume transactional workloads.

Software Engineer 1 — Jan 2024 – Aug 2025

ThinkNSolutions — Bengaluru, India

- Developed scalable data models, cloud architectures and automated batch workflows for transactional datasets across 5+ concurrent, high-volume insurance systems.
- Implemented automated data quality checks, custom validation rules, and cross-environment reconciliation; performed RCA on production pipeline anomalies to ensure continuous uptime.
- Automated business logic and reporting using Python and PL/SQL, reducing manual operational cycles by 60%.
- Wrote and executed 50+ UAT/regression test cases using JIRA to track defects and validate production deployments; led weekly stakeholder status meetings to translate infrastructure and business requirements into technical specifications.

Database SQL Developer — Sept 2023 – Jan 2024

ThinkNSolutions — Bengaluru, India

- Optimized enterprise data ingestion routines, stored procedures and ETL pipelines to process and integrate large CSV and relational datasets on AWS hosted PostgreSQL and MS SQL databases.
- Architected end-to-end SSIS packages and T-SQL/PostgreSQL stored procedures to automate complex ETL workflows.
- Maintained zero-downtime production deployments for critical financial modules through backend sign-offs and post-release validation; documented workflows and maintained code in Git.

Intern *(Internship)* **Mar 2023 – Sept 2023**

ThinkNSolutions — Bengaluru, India

- Built internal utility applications and scripts enforcing client-side and server-side data input validation across relational database systems.
- Achieved a 100% reduction in manual data entry errors by engineering custom Python and JavaScript validation utilities.

KEY PROJECTS

Production-Ready 3-Tier Web Application on AWS

EC2, VPC, RDS Aurora, ALB, CloudWatch | ReactorBee

- Architected and deployed a highly available 3-tier application with Multi-AZ architecture achieving 99.9% uptime.
- Designed a secure VPC with tier-based isolation: 5 security groups, 3 route tables and least-privilege IAM roles.
- Achieved 60-70% AWS cost reduction via rightsizing, automated resource management and idle-resource cleanup.

Load Balancer Configuration for Web Application

AWS, ALB, ELB, EC2, Auto Scaling | ReactorBee

- Implemented ELB with EC2 Auto Scaling Group for dynamic traffic handling and high availability.
- Configured an ALB distributing traffic across instances, improving fault tolerance and response times; monitored traffic patterns with CloudWatch to tune the configuration.

Static Website Deployment on AWS EC2 using Nginx

EC2, Nginx, Linux | ReactorBee

- Deployed a static website on EC2 with Nginx for secure, scalable hosting; configured a custom dark-mode UI and 404 error handling.
- Managed the Linux server end to end: installation, configuration and performance tuning.

VPC Peering & Network Optimization

VPC, Route Tables, Subnets, IGW | ReactorBee

- Implemented VPC peering for seamless communication between disparate cloud environments, with routing built on route tables, internet gateways and subnets.
- Reduced latency and improved efficiency through optimized routing and post-implementation monitoring.

Insurance Batch Data Automation & Quality Framework

PL/SQL, Python, Data Validation, Reconciliation | ThinkNSolutions

- Built scalable data models and automated batch workflows across 5+ concurrent, high-volume insurance systems with automated quality checks and cross-environment reconciliation.
- Automated complex business logic using Python and PL/SQL, cutting manual operational cycles by 60%.

Enterprise SSIS / T-SQL / PostgreSQL ETL Pipeline

SSIS, T-SQL, PostgreSQL, Stored Procedures | ThinkNSolutions

- Architected end-to-end SSIS packages and stored procedures to process, transform and integrate large CSV and relational datasets on AWS hosted database operations.
- Maintained zero-downtime production deployments for critical financial modules through rigorous sign-offs and post-release validation.

EDUCATION

Bachelor of Engineering – Computer Science and Engineering **Graduated 2022**

Visvesvaraya Technological University, BKIT | GPA: 7.99/10

CERTIFICATIONS & BADGES

- **AWS Cloud Quest: Cloud Practitioner** – Amazon Web Services (Trained)
- **AWS Certified Cloud Practitioner (CLF-C02)** – Amazon Web Services (In Progress)
- **Microsoft Azure Fundamentals (AZ-900)** – Microsoft (In Progress)
- **Credly Portfolio** – (credly.com/users/rutuja-naik.785cf2a0)

KEY ACHIEVEMENTS

- **60-70%** AWS cost reduction via rightsizing, automated resource management and idle-resource cleanup on a Multi-AZ 3-tier architecture.
- **99.9%** uptime on a highly available, Multi-AZ production web application architecture.
- **60%** reduction in manual operational cycles by automating business logic and reporting with Python and PL/SQL.
- **100%** reduction in manual data entry errors through custom Python and JavaScript validation utilities.
- Zero-downtime production deployments for critical financial and insurance-domain modules across 5+ concurrent systems.

CORE COMPETENCIES

DevOps Engineer • Cloud Engineer • Site Reliability • Database Administrator • AWS • VPC • EC2 • IAM • ALB/ELB • Auto Scaling • S3 • Route 53 • CloudWatch • CloudTrail • Lambda • RDS Aurora • Multi-AZ • VPC Peering • Cloud Migration • Cost Optimization • Kubernetes • EKS • Docker • Terraform • IaC • CI/CD • Jenkins • GitLab CI/CD • CodePipeline • GitHub Actions • Release Management • Prometheus • Grafana • ELK • Observability • Nginx • Linux • Shell/Bash • Python • JIRA • Agile • SQL Server • PostgreSQL • MySQL • T-SQL • PL/SQL • SSIS • Spark • Informatica • ETL/ELT • Data Quality • SSRS • Power BI • Production Support • Incident Management • RCA • UAT/Regression Testing • High Availability • Zero-Downtime Deployment • FinTech • Insurance • Stakeholder Management
